Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics as well as the availability of micro data tapes and other services should be directed to:

Survey of Consumer Finances Section,
Household Surveys Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9775) or to the Statistics Canada reference centre in:

| | |

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingué et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication, des bandes de microdonnées disponibles et des services connexes offerts doivent être adressées à:

Section de l'Enquête sur les finances des consommateurs
Division des enquêtes-ménages,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9775) ou au centre de consultation de Statistique Canada à:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |

SUMMARY

Census Families

- In 1984, average income of census families, at \$35,092, did not increase from 1983 on an inflation adjusted or real basis. Real average census family income was still below the peak attained in 1980 and lower than in 1981 and 1982.
- Average income in the provinces ranged from a low of \$26,187 for Newfoundland to a high of \$37,721 for Ontario.
- The proportion of families receiving less than \$20,000 was 27.8%, while 25.8% of all families received \$45,000 or more.

Persons Not in Family

- Average income for persons not in Census families in 1984 at \$14,744 did not change in real terms from 1983.
- The average income in the provinces ranged from a low of \$10,605 for Prince Edward Island to a high of \$16,438 for Alberta.
- For males and females, the proportions in receipt of income under \$5,000 were virtually the same as in 1983 at 14.9% and 14.6% respectively. At the other end, 23.4% of all males were in receipt of an income of at least \$25,000 as compared to 11.5% of females not in families. It should be noted that elderly females constituted 39.2% of female persons not in families, whereas elderly males only accounted for 15.7% of male persons not in families.

Historical Summary

The following text table presents a historical overview of census family incomes and changes in selected characteristics of families.

- Between 1971 and 1984, census family incomes increased by 19.7% in real terms. However, per capita family income¹ increased by 38.6% in the same period. The difference is due to the fact that family size decreased by 13.6% from 1971 to 1984, because of declining average number of children per family.

¹ Per capita family income is average family income divided by average family size.

RÉSUMÉ

Familles de recensement

- En 1984, le revenu moyen des familles de recensement s'établit à \$35,092, et n'a pas augmenté par rapport à 1983 après correction de la variation des prix. Le revenu réel moyen de la famille de recensement est toujours inférieur au sommet enregistré en 1980 ainsi qu'aux niveaux de 1981 et 1982.
- Le revenu moyen dans les provinces est compris entre un minimum de \$26,187 à Terre-Neuve et un maximum de \$37,721 en Ontario.
- La proportion des familles touchant moins de \$20,000 est de 27.8%. Celle des familles touchant \$45,000 ou plus est de 25.8%.

Personnes hors famille

- Le revenu moyen des personnes hors famille de recensement s'établit à \$14,744 en 1984, chiffre inchangé en termes réels par rapport à celui de 1983.
- Le revenu moyen dans les provinces est compris entre un minimum de \$10,605 à l'Île-du-Prince-Édouard et un sommet de \$16,438 en Alberta.
- La proportion des hommes et des femmes hors famille touchant un revenu inférieur à \$5,000 est à peu près la même qu'en 1983, soit 14.9% et 14.6% respectivement. Par contre, 23.4% de tous les hommes ont touché un revenu d'au moins \$25,000, comparativement à 11.5% pour les femmes hors famille. Il convient de noter que les femmes âgées représentent 39.2% des femmes hors famille, tandis que les hommes âgés ne comptent que pour 15.7% seulement des hommes hors famille.

Sommaire rétrospectif

Le tableau explicatif ci-après présente une vue d'ensemble rétrospective des revenus des familles de recensement et les changements dans certaines caractéristiques des familles.

- Entre 1971 et 1984, les revenus des familles de recensement ont augmenté de 19.7% en termes réels. Cependant, le revenu familial par habitant¹ s'est accru de 38.6% au cours de la même période. Cette différence s'explique par le fait que la taille de la famille a baissé de 13.6% entre 1971 et 1984 en raison d'une diminution du nombre moyen d'enfants par famille.

¹ Le revenu familial par habitant est le revenu familial moyen divisé par la taille moyenne de la famille.

- During the 1971-1984 period, real average income on both a family and per capita basis peaked in 1980, followed by a declining trend in the 1980's. However, the drop in real per capita family income between 1980 and 1984 was less than for average family income, down 1.9% compared to 5.2%. This was due to the decline in average family size after 1980.
- De 1971 à 1984, le revenu moyen réel à la fois par famille et par habitant est passé par un sommet en 1980 puis a suivi une tendance à la baisse dans les années 80. Cependant, la chute du revenu familial réel par habitant entre 1980 et 1984 n'a pas été aussi forte que celle du revenu familial moyen (1.9% contre 5.2%). Cette différence s'explique par la réduction de la taille moyenne des familles après 1980.
- During the period of increasing real average family income, there was a significant increase in the number of earners per family, from 1.54 in 1971 to 1.70 in 1981. After 1981, the number of earners per family declined to 1.65 in 1984, following in line with the declining trend for real average family income.
- Pendant la période de croissance du revenu familial moyen réel, il y a eu une augmentation appréciable du nombre de personnes gagnant un revenu par famille, qui est passé de 1.54 en 1971 à 1.70 en 1981. Après 1981, le nombre de gagnants par famille est tombé à 1.65 en 1984, suivant ainsi la tendance à la baisse du revenu familial moyen réel.

| 1984 | 35,092 | 11,070 | 3.17 | 0.87 | 2.06 | 1.65 | 14,744 |

NOTES AND DEFINITIONS

This report is produced annually in order to provide income distributions on a census family basis, rather than the economic family concept used in other reports issued from the Survey of Consumer Finances (SCF). The estimates provided in this report have been prepared from the same data used in the other SCF reports, except that persons were grouped into families using the census family rules instead of those for the economic family.

The current survey was conducted in April 1985 as a supplement to the monthly Labour Force Survey using two thirds of the regular sample (35,253 households). The sample represents virtually all private households in Canada except for residents of the Yukon and Northwest Territories, households located on Indian reserves and inmates of institutions. Since the estimates in this report are based on a sample household survey, they are subject to sampling variability. They are also subject to response errors (by respondents, interviewers and during processing) as well as errors due to non-response.

The 1985 Survey of Consumer Finances was the first one based on the redesigned Labour Force Survey sample. Following each decennial census, the sample design of the Labour Force Survey is revised to incorporate recent developments in sampling methodology and to reflect population changes indicated by the most recent census data. The latest redesigned sample was implemented in January 1985, to replace the design in use since 1975.²

The definition of family used in this publication is consistent with the family concept commonly used by Canadian Censuses. It should be noted however that the data produced by the Census and the survey are not completely comparable due to coverage and other minor differences.

In terms of content, this report is consistent with those previously published based on findings of large sample surveys. However, it should be noted that this publication incorporates a change affecting the urbanization classification which is now based on 1981 Census geographic boundaries and population counts. This updated version replaces the one previously used which was based on 1971 Census geographic boundaries and 1976 Census population counts.

NOTES ET DÉFINITIONS

Ce bulletin est publié chaque année et présente une répartition des revenus selon le concept de la famille de recensement plutôt que d'après le concept de la famille économique utilisé dans d'autres bulletins préparés à partir de l'enquête sur les finances des consommateurs (EFC). Les estimations présentées ici s'inspirent des mêmes données que les autres publications de l'EFC, si ce n'est que les personnes ont été groupées en familles d'après les règles de la famille de recensement plutôt que d'après celles de la famille économique.

L'enquête sur les finances des consommateurs a été menée en avril 1985 en tant que supplément de l'enquête mensuel sur la population active utilisant deux-tiers de l'échantillon régulier (35,253 ménages). L'échantillon représente pratiquement tous les ménages privés du Canada, à l'exception des habitants du Yukon et des Territoires du Nord-Ouest, des ménages situés dans des réserves indiennes et des pensionnaires d'institution. Étant donné que les estimations ici sont basées sur une enquête-échantillon de ménages, elles sont sujettes à une variabilité d'échantillonnage. Il faut également tenir compte des erreurs dans les réponses (commises par les répondants, les interviewers ou au cours du traitement) ainsi que des erreurs attribuables à la non-réponse.

L'Enquête sur les finances des consommateurs de 1985 était la première à se fonder sur l'échantillon révisé de l'Enquête sur la population active. Après chaque recensement décennal, le plan de sondage de l'enquête sur la population active est révisé pour y incorporer les dernières modifications aux méthodes d'échantillonnage et pour tenir compte des changements démographiques mis à jour par les données du recensement le plus récent. Le nouveau plan de sondage a été introduit en janvier 1985 pour remplacer celui utilisé depuis 1975.²

La définition de la famille utilisée dans cette publication est celle qui est couramment employée lors des recensements du Canada. Il convient toutefois de noter que les données produites par le recensement et par l'enquête ne sont pas entièrement comparables à cause de caractéristiques différentes, notamment le champ d'enquête.

Le contenu du présent rapport est conforme aux données publiées antérieurement qui étaient fondées sur les résultats de grands enquêtes-échantillons. Toutefois, il faut souligner que la présente publication comprend un changement en ce qui a trait à la classification des régions urbaines, désormais fondée sur les limites et les chiffres de population du recensement de 1981. La version à jour remplace celle qui était fondée sur les limites du recensement de 1971 et sur les chiffres de population du recensement de 1976.

² For further details on the redesign of the Labour Force Survey sample, see the feature article published in **The Labour Force, January 1985**, Catalogue No. 71-001.

² Pour obtenir de plus amples renseignements sur le remaniement du plan de sondage de l'enquête sur la population active, consultez l'article du mois paru dans **La population active, janvier 1985**, n° 71-001 au catalogue.

A detailed description of the Survey of Consumer Finances and methods used in data collection, processing and estimation can be found in **Income Distributions by Size in Canada, 1984**, Catalogue No. 13-207. The key definition, that of income, is repeated in this section where the census family concept is also explained.

Family

A census family, sometimes also referred to as "immediate family" or "nuclear family", consists of either a husband and wife (with or without children who have never married) or a parent with one or more children who have never married, living together in the same dwelling. Unmarried children, regardless of their age, living with their parent(s) are considered a part of the family, i.e., a census family includes adult children as long as they are not married, separated, divorced or widowed. For purposes of the Survey of Consumer Finances, adopted children, step-children and guardianship children under 21 are counted as own children although this is not necessarily the case in the Census.

Persons Not in Families

A person not in family is an individual who is living alone or living with unrelated individuals (as a lodger, employee or partner) or living with relatives but not in a husband-wife or parent-unmarried child (including guardianship child) relationship.

Individuals With Income or Income Recipients

An individual with income or an income recipient is any person 15 years or over who received some money income in 1984.

Earners

An earner is a person who received wages and salaries and/or net income from self-employment in 1984.

Head of Family

For the purposes of this report, the head of a family is determined as follows: (i) in families consisting of married couples with or without children, the husband is considered the head, (ii) in lone-parent families with unmarried children, the parent is the head.

On trouvera une description détaillée de l'enquête sur les finances des consommateurs, des méthodes de collecte, de traitement et d'estimation des données dans **Répartition du revenu au Canada selon la taille du revenu, 1984**, n° 13-207 au catalogue. La définition principale, soit celle du revenu, est répétée dans la présente section. On y explique également le concept de la famille de recensement.

Famille

Une famille de recensement, quelquefois appelée "famille immédiate" ou "famille nucléaire", se compose d'un époux et d'une épouse (avec ou sans enfants célibataires) ou de l'un ou l'autre des parents avec un ou plusieurs enfants célibataires, vivant dans le même logement. Les enfants célibataires, quel que soit leur âge, font partie de la famille s'ils vivent avec leurs parents, c.-à-d., qu'une famille de recensement comprend les enfants adultes tant qu'ils ne sont pas mariés, séparés, divorcés ou veufs. Aux fins de l'enquête sur les finances des consommateurs, les enfants adoptés, les enfants d'un autre lit et les enfants en tutelle, de moins de 21 ans, ont le même statut que les enfants issus du mariage, bien que ce ne soit pas nécessairement le cas dans le recensement.

Personnes hors famille

Une personne hors famille est une personne vivant seule ou avec des personnes non apparentées (par exemple, comme chambreur, employé ou associé) ou avec des personnes apparentées auxquelles elle n'est pas liée par des liens conjugaux ou des liens de filiation (ou de tutelle) si elle n'est pas mariée.

Particuliers ayant un revenu ou bénéficiaires d'un revenu

Un particulier ayant un revenu ou un bénéficiaire d'un revenu est une personne de 15 ans ou plus qui, en 1984, a reçu un revenu monétaire quelconque.

Personne gagnant un revenu

La personne gagnant un revenu est celle qui a reçu, en 1984, un salaire et traitement et (ou) un revenu net provenant d'un emploi autonome.

Chef de famille

Aux fins de ce bulletin, le chef de famille est défini comme suit: (i) dans les familles se composant d'un couple marié avec ou sans enfants, le chef de famille est l'époux, (ii) dans les familles monoparentales avec des enfants célibataires, le chef de famille est le père ou la mère.

Age and Sex

The age and sex variables for census family tables are determined as follows: husband-wife families use the age of the husband and lone-parent families use the age and sex of the parent.

Family Characteristics

The classification "family characteristics" is based on the relationship and marital status of the family members. The sub-categories of families are husband-wife families and lone-parent families.

Family Life Cycle

The classification "family life cycle" is similar to "family characteristics" in that it also groups families in two major categories: husband-wife families and lone-parent families. However, in this classification, husband-wife families are further broken down by the age of the husband (under 45 years; 45 years and over) and the presence or absence of children under 16 years.

Family Size

Family size refers to the total number of persons in the family as constituted at the time of the survey, including both adults and children of any age.

Number of Children

The variable "number of children" used in the tabulations is a count of the number of children under 16 years of age and 18 years of age present in a family. Table headings specify which age group is being tabulated.

Size of Area of Residence

The size of area classification is based on 1981 Census geographic boundaries and 1981 Census population counts in urban and rural areas as designated by the Labour Force Survey. Five size of area of residence groups are identified: four classes for urban areas (population 500,000 and over, 100,000 to 499,999, 30,000 to 99,999, and under 30,000) and one group for rural areas. Previously, the classification was based on 1971 Census geographic boundaries and 1976 Census population counts.

Âge et sexe

Dans les tableaux de la famille de recensement, les variables "âge" et "sexe" sont définies comme suit: dans les familles époux-épouse, l'âge de l'époux est utilisé tandis que dans les familles monoparentales, ce sont l'âge et le sexe du parent.

Caractéristiques des familles

La variable "caractéristiques des familles" est basée sur les liens de parenté et l'état matrimonial des membres de la famille. Les sous-catégories de familles sont les familles époux-épouse et les familles monoparentales.

Cycle de vie de la famille

La variable "cycle de vie de la famille" s'apparente aux "caractéristiques des familles", en ce sens qu'elle divise les familles en deux groupes principaux: les familles époux-épouse et les familles monoparentales. Dans la présente classification, toutefois les familles époux-épouse sont ensuite décomposées selon l'âge de l'époux (moins de 45 ans, 45 ans et plus) et selon qu'il y a ou non des enfants de moins de 16 ans.

Taille de la famille

La taille de la famille représente le nombre total de personnes (adultes et enfants de tous âges) faisant partie de la famille au moment de l'enquête.

Nombre d'enfants

La variable "nombre d'enfants" utilisée dans les totalisations désigne le nombre d'enfants de moins de 16 ans et de moins de 18 ans présents dans une famille. Dans tous les cas, les titres des tableaux précisent les groupes d'âge utilisés dans les totalisations.

Taille de la région de résidence

La classification selon la "taille de la région de résidence" est basée sur les frontières géographiques du recensement de 1981 et sur la population du recensement de 1981 dans les régions urbaines et rurales, désignées par l'Enquête sur la population active. Cinq groupes de taille de région de résidence comprennent quatre catégories pour les régions urbaines (500,000 habitants et plus, 100,000 à 499,999 habitants, 30,000 à 99,999 habitants, et moins de 30,000 habitants) et une catégorie pour les régions rurales. Préalablement, la classification était basée sur les frontières géographiques du recensement de 1971 et sur la population du recensement de 1976.

Tenure

The classification "tenure" contains two categories: owners and renters. The "owners" category is further classified by "with mortgage" and "without mortgage". "Renters" also includes roomers, lodgers, and family units and individuals who received free lodging or who resided with employers.

Income and its Components

Total Income

Total income consists of all money income receipts from the following sources: wages and salaries (before deductions for taxes, pensions, etc.), net income from self-employment (including net income from farming, independent professional practice and roomers and boarders), investment income (such as interest, dividends, rental income), government transfer payments (such as Family Allowances, Old Age Security, refundable provincial tax credits, child tax credit), pensions (such as retirement pensions, annuities and superannuation), and miscellaneous income (such as scholarships, alimony, etc.).³

Receipts Not Counted as Income

Gambling gains and losses, money inherited during the year in a lump sum, capital gains or losses, receipts from the sale of property or personal belongings, income tax refunds, loans received, loans repaid to an individual as the lender, lump sum settlements of insurance policies, and rebates of property taxes and other taxes were excluded as well as all income in kind such as free meals, living accommodation, or food and fuel produced on own farm.³

Family Income

Family income is defined to consist of incomes received by all individuals 15 years of age and over who at the time of the survey formed one census family. Income data were collected from each member and considered to be part of the family's income even

Mode d'occupation

La variable "mode d'occupation" se divise en deux catégories: propriétaires et locataires. La catégorie des propriétaires est ventilée en "avec emprunt hypothécaire" et "sans emprunt hypothécaire". Les "locataires" comprennent également les chambreurs, les pensionnaires ainsi que les unités familiales et les particuliers qui reçoivent le gîte gratuitement ou qui demeurent avec leur employeur.

Revenu et composantes du revenu

Revenu total

Le revenu total comprend toutes les recettes en espèces provenant des sources suivantes: salaires et traitements (avant déduction des impôts, des pensions, etc.), revenu net provenant d'un emploi autonome (y compris le revenu net agricole ou provenant de l'exercice d'une profession) et le revenu net provenant de l'hébergement de chambreurs et de pensionnaires), revenus de placements (tels que revenu d'intérêts, de dividendes et de loyers), transferts (tels que les allocations familiales, les pensions de vieillesse, les crédits d'impôt provinciaux remboursables, le crédit d'impôt pour enfants), pensions (telles que les pensions de retraite et rentes), et revenus divers (bourses d'études, pensions alimentaires, etc.).³

Gains non comptés comme revenus

Sont exclus du revenu: les gains et pertes au jeu, les sommes globales héritées au cours de l'année, les gains ou les pertes de capital, le produit de la vente de propriétés ou de biens personnels, les remboursements d'impôt sur le revenu, les prêts reçus, les prêts remboursés à un particulier agissant comme prêteur, les règlements forfaitaires en matière d'assurance, les remboursements de l'impôt foncier ou d'autres impôts ainsi que les avantages en nature comme les repas gratuits et le gîte, ou encore la nourriture et le combustible produits sur sa propre ferme.³

Revenu de la famille

Le revenu de la famille se compose de tous les revenus reçus par tous les particuliers âgés de 15 ans et plus qui, au moment de l'enquête, constituaient une famille de recensement. Les données sur le revenu ont été recueillies auprès de chaque membre et considérées comme portant sur le

³ For further details, see "Notes and Definitions" in *Income Distribution by Size in Canada, 1984*, Catalogue No. 13-207.

³ Pour plus de détails, voir "Notes et définitions" dans *Répartition du revenu au Canada selon la taille du revenu, 1984*, n° 13-207 au catalogue.

if certain family members belonged to another family unit for the whole or part of the preceding calendar year. Also, no recall or adjustment was made to account for income of persons who were members of the family for part of the year and who left because of marriage, death or other reasons.

Number of Records

The term "number of records" refers to the number of income respondents plus the number of records with imputed income details. This terminology is used to show the inclusion of imputed records in contrast to the term "sample size" used in pre-1977 reports to indicate income respondents only. For a detailed explanation of the estimation methodology, see "**Sources, Methods and Estimation Procedures**" in Catalogue No. 13-207, 1984.

COMPARISON OF CENSUS AND ECONOMIC FAMILIES

The main series of income reports based on Surveys of Consumer Finances, the latest of which is **Income Distributions by Size in Canada, 1984**, Catalogue No. 13-207, employs a broader family definition (economic family) than the census family. The definition of economic family includes all relatives living in the same dwelling and also classifies persons living by themselves or in a household where they are not related to other household members as unattached individuals.

The series on income distributions of census families and persons not in families was started with the publication of the report **Family Incomes (Census Families), 1967**, Catalogue No. 13-538, in recognition of the fact that, for different purposes, groupings of individuals into units other than the economic family might be more appropriate.

In the majority of cases, grouping the population according to census family rather than economic family definition does not result in family composition changes within households, since most households contain only an immediate family which by either definition is one unit.⁴

⁴ For a detailed discussion of differences between the economic family and census family concepts, see **Family Incomes (Census Families), 1977**, Catalogue No. 13-208, pages 13 and 24.

revenu de la famille, même si certains membres de la famille avaient appartenu à une autre unité familiale pendant une partie ou la totalité de l'année civile précédente. En outre, on n'a effectué aucun retrait ou ajustement pour tenir compte du revenu des personnes qui avaient été membres de la famille pendant une partie de l'année et qui ont cessé d'en faire partie pour cause de mariage, de décès ou toute autre raison.

Nombre de dossiers

Le terme "nombre de dossiers" comprend les dossiers des répondants ainsi que ceux des non-répondants à qui l'on a imputé des données sur le revenu. On utilise ce terme afin d'indiquer que les dossiers des personnes auxquelles on a imputé des données sont compris, alors que le terme "taille de l'échantillon", employé dans les bulletins antérieurs à 1977, ne désigne que le nombre de répondants. On trouvera une explication détaillée de la méthode d'estimation à la section "**Sources, méthodes et procédures d'estimation**" de la publication n° 13-207 au catalogue, 1984.

COMPARAISON DES FAMILLES DE RECENSEMENT ET DES FAMILLES ÉCONOMIQUES

La principale série des publications sur le revenu fondées sur les enquêtes sur les finances des consommateurs, dont la plus récente est **Répartition du revenu au Canada selon la taille du revenu, 1984**, n° 13-207 au catalogue, utilise une définition plus large de la famille (famille économique) que la famille de recensement. La définition de la famille économique comprend toutes les personnes apparentées habitant le même logement; elle classe aussi comme personnes seules les personnes habitant seules ou dans un ménage où elles ne sont pas apparentées aux autres membres du ménage.

La série sur la répartition du revenu des familles de recensement et des personnes hors famille commençait avec la publication de **Family Incomes (Census Families), 1967**, n° 13-538 au catalogue. On avait reconnu le fait que, à diverses fins, le groupement des personnes en unités autres que la famille économique pourrait s'avérer plus approprié.

Dans la plupart des cas, le classement de la population selon les familles de recensement plutôt que selon les familles économiques ne fait pas changer la composition des familles au sein des ménages, car la plupart des ménages se composent d'une seule famille qui, selon les deux définitions, représente une unité⁴.

⁴ Voir un exposé détaillé sur les différences qui existent entre les familles économiques et les familles de recensement dans **Revenus des familles (Familles de recensement), 1977**, n° 13-208 au catalogue, pages 13 à 24.

In those situations where a composition change does occur, an economic family can be divided into:

- (i) two or more census families,
- (ii) one or more census families with one or more persons not in families present,
- (iii) a group of persons not in families.

For example, parents living with their married son and his wife would be considered as part of the economic family, whereas in census terms, both couples are counted as separate families; one economic family of size four becomes two census families of two persons each. In other cases, related individuals, like elderly widowed parents, are absorbed into the economic family, whereas according to the census definition, they are persons not in families. Finally, the census defines a household that contains two or more related individuals such as sisters or brothers as a non-family household consisting of persons not in families, whereas according to the economic family definition these individuals would form one family.

The grouping of individuals into families under the two different definitions does not make a great deal of difference to the number of families; nationally, the number of economic families is only slightly higher than the number of census families. Consequently, the income picture also changes very little. Average income of all census families at \$35,092 is somewhat lower than that of all economic families (\$35,767) as can be seen in Text Table II. This is due to the splitting-off of related families and persons not in families who in the economic family series were part of the family. The resulting census families are smaller and have less income, having lost members with income.

The definitional differences between census and economic families have the greatest impact in changing the size of the population not in families. From Text Table II, it can be seen that there were approximately 767,000 individuals in 1984 who were classified as persons not in families based on census family definition although they had been part of an economic family, i.e., they were living in households where they were related to at least one other household member. The income of these persons not in families has in past studies always been found to be considerably lower than that of unattached individuals. Consequently in 1984, average income of all persons not in families at \$14,744 is also lower than that of all unattached individuals at \$15,712.

Dans le cas où la composition de la famille change, on peut diviser une famille économique en:

- (i) deux ou plusieurs familles de recensement,
- (ii) une ou plusieurs familles de recensement avec une ou plusieurs personnes hors famille qui sont présentes,
- (iii) un groupe de personnes hors famille.

Par exemple, les parents habitant avec leur fils marié et son épouse seraient considérés comme faisant partie de la famille économique tandis que, pour le recensement, les deux couples seraient comptés comme des familles distinctes; une famille économique de quatre personnes devient deux familles de recensement comptant chacune deux personnes. Dans d'autres cas, des personnes apparentées, comme un père ou une mère âgés et veufs, sont absorbées dans la famille économique, tandis que selon la définition du recensement, ce sont des personnes hors famille. Finalement, le recensement définit un ménage comptant deux ou plusieurs personnes apparentées, par exemple des frères ou des soeurs, comme un ménage non familial comprenant des personnes hors famille, tandis que selon la définition de la famille économique, ces personnes constitueraient une famille.

Le classement des personnes selon les deux genres de familles n'influe pas beaucoup sur le nombre de familles; au niveau national, le nombre de familles économiques n'est que légèrement supérieur au nombre de familles de recensement. En conséquence, le revenu varie également très peu. Le revenu moyen de toutes les familles de recensement, soit \$35,092 est quelque peu inférieur à celui de l'ensemble des familles économiques (\$35,767), comme le montre le tableau explicatif II. Cela est dû au fait que des familles apparentées et des personnes hors famille qui faisaient partie de la famille économique ont été écartées. Les familles de recensement qui en résultent sont plus petites et ont moins de revenu, car elles ont perdu des membres recevant un revenu.

La différence de définition entre la famille de recensement et la famille économique contribue surtout à modifier la taille de la population hors famille. Selon le tableau explicatif II environ 767,000 personnes étaient classées comme personnes hors famille en 1984, d'après la définition de la famille de recensement, même si elles faisaient partie d'une famille économique, c'est-à-dire même si elles habitaient dans des ménages où elles étaient apparentées à au moins un autre membre du ménage. Il est ressorti d'études antérieures que le revenu des personnes hors famille a toujours été de beaucoup inférieur à celui des personnes seules. Par conséquent, le revenu moyen des personnes hors famille (\$14,744) en 1984 est également moindre que celui des personnes seules (\$15,712).

TEXT TABLE II. Percentage Distribution of Economic Families, of Census Families, of Unattached Individuals and of Persons Not in Families, by Income Groups, 1984

TABLEAU EXPLICATIF II. Répartition en pourcentage des familles économiques, des familles de recensement, des personnes seules et des personnes hors famille, selon la tranche de revenu, 1984
